

Why Z-3080, Alpha-70EC, Alpha-50WA can not read MSI/PLESSY barcodes?

ZEBEX scanners are set “double check digit” for MSI/PLESSY barcodes. To set scanner to “single check digit & not transmitted” for MSI/PLESSY barcodes:

1. Start of configuration.

2. Single check digit, calculate but not transmitted.

3. End of configuration.
